NATIONAL REF.: 165750617
TITLE : Not-regulated professions - Professionals of relational
counseling - Definition of knowledge, skill and
competence requirements

TITLE AMPLIF.: This standard specifies the requirements for the
counselors (relational counseling professionals):
counseling is an helping profession focus on
relationship that moves from client problems aiming to
a new vision of these problems and to promote an action
plan to achieve the client expectations and goals (for
example: taking decision, growing-up quality in
relationship, bring up awareness, lead emotions and
feelings, overcome conflicts). The requirements for
counselors are composed by knowledge, skills and
competences, in accordance also with the European
Qualifications Framework, EQF. This standard describes
the professionals in all different operational context
where is working.

NATIONAL REF.: 165750622
TITLE : Smoke and heat control systems - Part 4: Engineering
methods for the design of smoke and heat exhaust
ventilation systems
TITLE AMPLIF.: The standard concerns the smoke and heat exhaust
ventilation systems designed by means of performance
based approach, to address the design of such systems
in complex buildings and infrastructures, and/or when
they are not within the scope of application of
deterministic standards, where the engineering approach
is considered appropriate. This standard is aimed at
defining guidelines, limits and base parameters to be
used for the design as well as the performance criteria
to be verified by means of a performance based
approach.

NATIONAL REF.: 165750682
TITLE : Gas measurement systems - Hourly based gas metering
systems - Part 4: Requirements for meters with capacity
more than 65 m3/h (Group G40)
TITLE AMPLIF.: The technical standard it defines:- measurement data to
take in account and recorded by different considered
devices;- for each of considered devices : minimum
guaranteed performances and minimum constructional
requirements to reach such performances.- the
appropriate procedures for remote transmission of
measurement data take in account;- the adequate
manutention programmes.-The technical specification
applies to gas measurement systems that serve points of
redelivery of distribution plants with maximum flow
rate not greater than 65 m3/h st, at the riferiment
conditions or meter > G40.

NATIONAL REF.: 165750687

TITLE : Gas measurement systems - Hourly based gas metering systems - Part 5: Requirements for meters with capacity more than 16 M3/H (group from G10 UP TO G40)

TITLE AMPLIF.: The provisions of resolution ARG/gas 155/08 Instructions for the obligatory commissioning of gas metering units meeting minimum functional requirements and having remote reading and remote management functions, for all redelivery points on natural gas distribution networks released from Authority for gas and electricity (AEEG), introduces an obligatory requirement, to be phased in gradually over time, for the commissioning of metering units meeting the minimum functional requirements established for each category, for all redelivery points on natural gas distribution networks. With the present provision the Authority shall pursue the following aims to be achieved through standardisation activity: a) to create the functional and technological conditions for the introduction of mechanisms to develop a market system for natural gas, to support the definition of the regulated market for natural gas and the new balancing service; b) to make it easier to eliminate any inefficiencies and discriminatory features by improving the process of recording and accounting for the natural gas withdrawn by consumers and introducing technological innovations to metering units; c) to improve the quality of natural gas metering, sales and distribution services, while ensuring the same functional and service levels irrespective of the operator responsible for the metering service and fostering greater awareness of consumption levels. This new part of the UNI TS 11291 family covers the technical requirements for meters with capacity more than 16 m3/h for accomplishing the relevant AEEG requirement

NATIONAL REF.: 165750912
TITLE : Powder metallurgy - Hot Isostatic Pressing materials -
Argon detection using gas chromatography technique
TITLE AMPLIF.: This national standard specifies a gas chromatography
method of determining argon levels in the range 0.001
ppm to 5 ppm in gas atomized metal powder produced
products, consolidated by Hot Isostatic Pressing. The
standard recommends certain allowable argon levels for
products and materials covered by this standard; alloy
steel, stainless steel, nickel and cobalt base alloy
components for use in general and pressure purposes.
Included are pipes, flanges, fittings, valves, and
similar parts. The determination of the argon levels
applies to a specific type of equipment which is
described in this national standard. The standard also
describes the calibration of the equipment and the
preparation of the samples and reference samples. This
standard can also be used for other types of compacted
and/or densified powders as guidance.

TITLE : Public entertainment systems - Specifications for
design, calculation, manufacture and use and
maintenance of trusses, towers and associated
structural components made of aluminium and steel or
other alloys
TITLE AMPLIF.: This document specifies the design, calculation,
manufacture and use and maintenance of trusses, towers
and associated structural components made of aluminium
and steel or other alloys used in the public
entertainment industry. The structures assembled with
these elements can have complex forms through the use
of corner blocks, arcs and other special elements. Truss
constructions and towers are typically used to support
static and dynamic loads or to serve purely decorative
purposes. They can be hung, ground- or wall-supported,
permanently installed or used as a moving construction.
