NATIONAL REF.: 222012279  
TITLE : Concrete - Specification, performance, production and conformity - Part 1: Rules for the implementation of ÖNORM EN 206 for normal and heavy concrete  
TITLE AMPLIF.: This ÖNORM is valid for normal-weight and heavy-weight concrete which is used for structures cast in situ, precast structures, and structural precastproducts for buildings and civil engineering structures. The concrete may be mixed on site, ready-mixed concrete or produced in a plant for precast concrete products.

-----  
NATIONAL REF.: 222012396  
TITLE : Structural design of buried water and sewerage pipelines

TITLE AMPLIF.: The purpose of this ÖNORM is to provide guidance for the structural analysis of buried pipelines. The calculation is based on generally accepted technical and field-proven principles. This ÖNORM contains a calculation method for buried pipelines and determines the stresses of piping systems made of all materials to be used for the transport of water / wastewater in pressure or gravity pipelines. The standard describes the design and structural analysis of buried pipes for all applications in water supply and sanitation on the basis of the calculation of stress, strain and deflection. There are established guidelines for the critical design criteria (stress, deformation and / or deflection calculation). The method is applied for all nominal diameters of pipes. However, for very large diameters the design in the installation of pipes may require the inclusion of other additional parameters, such as the homogeneity of the surrounding soil.

NATIONAL REF.: 222012240  
TITLE : Water quality - Sampling - Part 5: Guidance on sampling of drinking water from treatment works and piped distribution systems (ISO 5667-5:2006)  
TITLE AMPLIF.: ISO 5667 is a group of standards dealing with the general aspects of sampling (Parts 1 to 3) and with the sampling of specific types of water (from Part 4 onwards). ISO 5667-5 covers the sampling of drinking water within a piped distribution system and should be read in conjunction with ISO 5667-1 and ISO 5667-3. Effective monitoring of drinking water requires collaboration between sampling programme designers, water treatment plant and distribution system operators, sample collectors, laboratory analysts and data users. ISO 5667-5 gives guidance on the selection of sampling locations and the collection of samples when monitoring drinking water from treatment plants and from piped distribution systems. Understanding of the purposes for monitoring drinking water and of the principles behind the methods of analysis is important, since specific sampling protocols can vary widely in accordance with different purposes and different analytical methods.

TITLE : Requirements for the characteristics of bath water in  
whirl tubs - Operation, maintenance and inspection  
TITLE AMPLIF.: This ÖNORM specifies requirements for the quality of  
bathing water in whirl and hygiene-related equipment,  
and the hygiene-relevant operation. Whirlpool tubs in  
accordance with this ÖNORM are provided for the  
intended use by one person. The information contained  
in this ÖNORM applies to whirlpools, which are operated  
in hospitals and convalescent homes, nursing  
facilities, bathing facilities accommodation  
establishments, community facilities and public and  
private buildings. For whirlpool tubs that are filled  
in the context of medical applications, for instance  
with thermal water, higher requirements than described  
in standard should be applied in special individual  
cases. Safety requirements for whirlpool baths (with  
the exception of use by kids and toddlers and  
handicapped people) are defined in OVE / EN 60335-2-60  
ÖNORM.

TITLE : Water quality - Vocabulary - Part 2 (ISO 6107-2:2006 +  
Amendment 1:2012)

TITLE AMPLIF.: The ÖNORM ISO 6107 consists of a series of nine parts,  
under the general title Water quality - Vocabulary. And  
defines terms used in certain fields of water quality  
characterization. In addition to the terms and  
definitions in the three official ISO languages  
(English, French and Russian), this part of ISO 6107  
gives the equivalent terms and their definitions in the  
German language. The definitions are not necessarily  
identical to those in standard scientific text books or  
dictionaries. These definitions have been formulated  
for technical purposes, as well as for the  
understanding and benefit of the non-expert in the  
field.

NATIONAL REF.: 222013045  
TITLE : Building acoustics -- Noise protection in buildings --  
Part 5: Residential buildings with improved acoustical  
performance -- Requirements and classification scheme  
TITLE AMPLIF.: This Standard sets the requirements for protection  
against noise in residential buildings with improved  
acoustical performance. The minimum requirements  
obligatory for all buildings are defined in following  
polish standards: PN-B-02151-2 (currently under  
revision), PN-B-02151-3 (currently in the last phase of  
revision). This standard defines classes for  
residential buildings/apartments and sets requirements  
concerning: allowable maximum noise level from  
installation equipment in the building (extension of  
the requirements set in the PN-B-02151-2 standard),  
sound insulation properties of internal and external  
walls (extension of the requirements set in the  
PN-B-02151-3 standard) and sound reverberation in rooms  
(extension of the requirements set in the PN-B-02151-4  
standard). Additionally this standard describes  
procedures for classifying buildings based on control,  
in-situ measurements.

NATIONAL REF.: 222012544  
TITLE : Management system of smart tourist destinations.  
Requirements  
TITLE AMPLIF.: This standard establishes a management system to provide the tourist destination with a useful tool to determine the intelligence of a destination. The adoption of a management system of a Smart Tourist Destination, is a strategic decision affecting the destination and the responsible body of the destination. The implementation of the management system is influenced by varying needs, objectives, products, services provided, processes and organizational structure. The standard will provide with a methodology to manage integrally a smart tourist destinations with a focus on continuous improvement and enhancement of resources and geographical space. This standard would apply to the managing body of the destination, usually the City, without detriment to other organizations with delegated responsibilities, or who can assume the responsibilities in this area (eg,. Council, Government, Ministry, council, etc.) The model has its basis on the draft Intelligent Tourism Destination, developed on behalf by the Ministry of Tourism, as established in the National Tourism Plan (PNIT) 2012-2015 approved by the Government of Spain in June 2012, where the following definition of Smart Tourist Destination is approved: "An innovative tourist destination consolidated on cutting edge technology that ensures the sustainable development of the territory, facilitates innovative tourist visitor interaction and integration with the environment, and increases the quality of the visitor's experience at the destination."

NATIONAL REF.: 222012549  
TITLE : Indicators of smart tourist destinations.  
TITLE AMPLIF.: This standard establishes a set of specific guidelines,  
in the form of criteria and indicators to assess the  
various aspects of a tourist destination and to  
identify those that are critical in order to consider a  
destination as an intelligent one. The catalogue of  
indicators will be developed initially identifying the  
destination management body (or management bodies) of  
the destination in order to determine the relevance of  
the indicators based on the following criteria:  
Relevance: Possibility of using an indicator in  
relevant decisions related to destination management,  
improvement of resident satisfaction and tourist  
visitor experience. In this regard the following  
actions be undertaken: - Determine the degree of  
importance of each indicator in relation to their  
relevance to facilitate decision making. -  
Identification of stakeholders who will use the  
information provided by a given indicator. -  
Specification of the frequency, speed and degree of  
detail of information for each indicator. Feasibility:  
Feasibility to access the extent required in each of  
the indicators. - Determine if there are valid sources  
that respond to the need for information and detecting  
agents that can provide access to them. - Evaluate the  
possibility of generating a measurement system on  
arrival, in case of not having access to a relevant  
indicator Reliability: Detect valid and reliable  
sources of information that support the indicator: -  
Reliability: Consistency or stability of the measure -  
Validity: what is being measured is what has to be  
measured

Definitions, specifications and conformity  
TITLE AMPLIF.: This standard specifies requirements for  
alkali-resistant (AR) glass fibres for structural or  
non structural in concrete, mortar and grout use.Note:  
The structural use of fibres in concrete occurs when  
fibres are intended to contribute the load bearing  
capacity of a concrete element. This standard covers  
these fibres to be used in concrete and mortars,  
including sprayed concrete, concrete for ground and  
paving use, prefabricated concrete, in situ, and repair  
concrete.

TITLE : Smart Cities. Asset management of the city. Specifications.  
TITLE AMPLIF.: This National Standard specifies requirements for establishing, implementing, maintaining and improving a system of management of municipal assets for the purpose of enabling a local authority to have a systematic approach to achieve continuous improvement in their management, including all elements up the inventory of assets and rights. This National Standard defines a set of coordinated and systematic activities, so that a local authority in accordance with its strategic plan, can handle optimal and sustainable way: their assets, performance, risks and costs associated with over life cycle of the different assets. This Standard applies to the management of physical assets and asset systems of the local authority. Understanding how active those defined in Annex exemplary. This National Standard is designed to be used independently or can be aligned or integrated with management systems covered by other Standards. This Standard applies to all local authorities who wish to ensure they meet their asset management policy declared and want to show this fulfilment to third parties. This conformity can be confirmed by a self-assessment and self-declaration of conformity or certification by asset management system by an external organization.

TITLE : Assessment of in-situ compressive strength in structures  
and precast concrete components - Complementary guidance  
to that given in TS EN 13791  
TITLE AMPLIF.: This Standard complements TS EN 13791, which gives  
methods for determining the characteristic in-situ  
compressive strength in concrete structures and precast  
concrete components based on: a) core testing; b) rebound  
hammer, ultrasonic pulse velocity and pull-out force  
measurements after a relationship with core strength  
has been determined for the particular concrete under  
investigation. This Standard also provides additional  
guidance on: - planning an investigation, selection of  
test methods, selection of the test locations,  
assessment of individual core results within a group;  
assessment where the strength of concrete based on  
test, specimens is in doubt. In addition, this British  
Standard provides guidance on the following cases not  
covered by TS EN 13791- assessment of an unknown  
structure using a margin based on the t-statistic, use  
of indirect methods without correlation to core  
strength, relative testing, i.e. comparison of a volume  
of concrete under investigation with concrete in  
similar elements that has been accepted, action when  
the producer has declared nonconformity.

NATIONAL REF.: TSE tst97225  
TITLE : Boric Oxide For Industrial Use-Determination of Boric  
Oxide Content-Volumetric Method  
TITLE AMPLIF.: This standard covers the volumetric determination of  
boric oxide content in boric oxide for industrial use.
